BRICK

Modern and rational spirit, at international level

Caccaro, the long-established Italian design furniture manufacturer, presents Brick: an innovative modular system of storage units suitable for various home environments, from the living area to the night area and to “accessory spaces”.

Brick means freedom of composition: a broad range of modules which, when combined like lots of small bricks, give a unique touch and strong personality to home environments.

Main features:

- Horizontal open-front wood compartment: also perfect for housing electronic apparatus such as Hi-Fi systems, thanks to the back panel, already designed to accommodate cables.
- Metal base with height-adjustable feet.
- Essentiality and aesthetically clean lines. Convenient push-pull pressure opening.
- Care for detail. 45° joint between top and side and front with reduced thickness.
- The Brick base becomes a comfortable bench, thanks to the addition of soft cushions.

BRICK MULTIMEDIA

Innovative suspended wall system complete with drop-down opening and inner drawers. The integrated TV column allows connecting the appliance to the top and neatly positioning and concealing the cables inside the unit.

It is also designed to accommodate a top-quality audio system, integrated and controllable by means of a Bluetooth device. The drop-down front is made of perforated metal, designed to allow audio and electronic signals to pass through.

Connessione Bluetooth Bluetooth connection	3.0 prof. A2DP	Pulsante e sensore infrarosso per associazione con telecomando televisore Ingressi selezionabili con pulsante Button and infra-red sensor for association with TV remote control Inputs selectable by button	Ingresso audio digitale ottico Optical digital audio input
