Bedroom Furniture Design – Groove, Innovative Bed System

Caccaro's constant search for the creation of one-of-a-kind home interior with a strong personality has led to the reinterpretation of the bedroom design with **Groove – Monica Graffeo's design** – an **innovative bed system** with an essential design for a night beyond expectations.

The traditional headboard disappears and becomes all one with the wall thanks to a particular aluminium wall bar which can be fitted at different heights depending on the required functions. This scenic design element becomes the protagonist of the bedroom: thanks to the numerous accessories, it can replace the traditional bedside unit and be turned into a practical shelf or can be personalized with a cushions-upholstered back panel, easy to position by sliding.

The innovative Groove bar features integrated LED lighting to recreate a predominant atmosphere of well-being and a latest-generation audio system which, by means of a special App, can be controlled from smartphone and tablet.

Completely personalizable thanks to a range of removable sartorial fabrics, the Groove night system becomes a perfectly integrated furnishing element with a broad range of Caccaro furnishing solutions.
